

Easy, fast and safe in the root canal

Syringe

STEP 1
Slight pressure on the plunger and premixed material is dispensed from the tip.

STEP 2
Either insert GuttaFlow® 2 into the root canal with the master point (a), the last used apical file (b) or a lentulo spiral (c).

STEP 3
Coat the masterpoint with sufficient GuttaFlow® 2 and set the apical stop. Depending on the clinical situation accessory gutta-percha points can be coated and inserted. GuttaFlow® 2 combines sealer and gutta-percha in one product, the use of any sealers is not required. No lateral or vertical condensation is necessary.

Capsule

STEP 1
Determination of the working length.

STEP 2
Move the green rubber stop 3 mm down towards the tip opening.

STEP 3
Push the cap right down over the capsule and then remove it. Mix GuttaFlow® 2 (capsule) for 30 sec. in a triturator.

STEP 4
Remove the green activation pin from the capsule, twist the pre-set canal tip with endo stop and insert the capsule into the dispenser.

STEP 5
Dispense GuttaFlow® 2 into the canal until you can see the material.

STEP 6
Then coat the masterpoint with GuttaFlow® 2.

STEP 7
Then permanently place the master point and fill the remaining canal space with GuttaFlow® 2.

STEP 8
Finally shorten the master point with a hot instrument.

Expansion meets Adhesion.

The new GuttaFlow®-generation.

- Two in One – Cold filling system for root canals
- Expansion – No time consuming condensation required
- Adhesion to gutta-percha point and dentin wall

COLTENE®ENDO

roeko

Endodontic, cotton and hygiene products

COLTENE ENDO – Your endo specialist

COLTENE ENDO stands for expertise in the production of essential and reliable endodontic materials. Paper and gutta-percha points, GuttaFlow®, RoekoSeal, ParaPost and ParaCore are clinically proven products that ensure successful endodontic therapy.

New! With dual effect

GuttaFlow® shows an excellent fit to dentin and gutta-percha.
Prof. Jorge and Norma Uribe Echevarría,
Faculty of Odontology, Córdoba, Argentina

Two in One – Cold filling system for root canals

GuttaFlow® 2 is a novel filling system for root canals that combines two products in one: gutta-percha in powder form with a particle size of less than 30 µm, and sealer. This new filling system works with cold free-flow gutta-percha.

Expansion meets Adhesion!

Tight seal due to expansion and adhesion of GuttaFlow® 2
GuttaFlow® 2 is the first flowable, non-heated gutta-percha that does not shrink but expands slightly. The slight expansion of the material leads to an excellent seal. Furthermore GuttaFlow® 2 shows a very good adhesion to the gutta-percha point (masterpoint) as well as to the dentin wall.

Qualities of GuttaFlow® 2

Excellent flow

GuttaFlow® 2 has excellent flow properties.

This feature ensures optimum distribution throughout the root canal. The material is thixotropic, the viscosity diminishes under pressure so GuttaFlow® 2 flows into the smallest canals.

Dentin tubules filled with GuttaFlow®.
Dentin had been removed with acid.
Prof. Halina Pawlicka, University of Lodz
Dr. Johannes Ebert, University of Erlangen

Solubility of 0,0%*

GuttaFlow® 2 shows virtually no solubility.

Through contact with body fluids, materials may dissolve over the years, creating space for bacterial colonization. Most standard root canal sealer materials are soluble to a varying degree. The solubility of GuttaFlow® 2 is virtually zero. In fact, tests according to ISO 6876:2001 show a solubility of 0.0%*. This results in a dimensionally stable and impervious root canal filling.

Very good biocompatibility

In the case of endodontic filling materials that remain in the body for many years, it is particularly important that there is no adverse effect on the surrounding tissue. Conventional materials demonstrate toxic characteristics ranging from “nontoxic mildly”, “moderately toxic” to “severely toxic”. Clinical studies show GuttaFlow® to be extremely biocompatible.

Optimum protection

The micro-silver in GuttaFlow® 2 provides optimum protection against re-infection of the root canal. The chemical form and concentration of the silver do not lead to any corrosion or discoloration of GuttaFlow® 2.

Syringe or capsule

The simple way to root canal obturation

- Flowable cold filling system
- Two in One – combines sealer and gutta-percha
- Expansion – no time consuming condensation required
- Adhesion to gutta-percha point and dentin wall
- The use of any additional sealers is not required
- Tight seal of the root canal due to expansion and adhesion
- Allows for excellent post preparation
- Excellent flow properties
- Solubility is virtually zero
- Very good biocompatibility
- Optimum protection against re-infection
- Excellent radiopacity

Very good adhesion to masterpoint and dentin

Clinically tested through and through Successful healing with **GuttaFlow®**

Clinical study

Clinical investigations on the conventional GuttaFlow® are organised in the framework of a multi-center study under the direction of NIOM (Norwegian Institute for Dental Material Testing) and conducted in clinics in Germany, Norway and the USA. The preliminary closing study report shows excellent healing results. On the basis of the PAI Scoring system, success rates of 0.7 – 0.8 were measured which have been documented over a period of one year.

Further studies

A wide range of further studies on GuttaFlow® has already been conducted.

You can find these under **www.guttaflow.com**.
