

Super Powers for Prophylactic Super Heroes

Flairesse Paste · Flairesse Gel ·
Flairesse Foam · Flairesse Varnish
Preventive dental care

Your all-in-one system for comprehensive preventive dental care

Join us to become a preventive dental care hero with Flairesse: our all-in-one system formulated for maximum protection from cleaning to strengthening your patients' teeth. Available in a choice of flavours to make caring for teeth even more enjoyable. Flairesse Paste, Gel, Foam and Varnish provides comprehensive protection that ensures you'll always have the right preventive care to hand. This makes every treatment step easier, more enjoyable and efficient. This way, you're not just providing your patients with super convenient protection, but also a brighter smile.

Flairesse – benefits for patients and dental practitioners

For practitioners:

- + Easy to use and apply
- + Highly effective formula
- + Functional consistency: no splashing or dripping
- + A perfectly synchronised all-in-one system
- + Suitable for children, adults and older people

For patients:

- + Quick to apply
- + Highly effective caries prevention
- + Pleasant feel: available as a gel or foam
- + Produces zero discomfort
- + Available in a choice of flavours

Straightforward. Super powered. Heroic prophylactic treatment system.

Flairesse is a first-rate preventive dental care system designed for maximum ease of use and super happy patients. Each of these premium products are also strong solo performers and effectively contribute to dental health in their own right.

All Flairesse products contain fluoride and xylitol, are vegan and do not contain any gluten, saccharin, aspartame, lactose or other known allergy triggers.

Super powered. Straightforward. Prophylactic treatment.

1 Cleaning and polishing

Flairesse Paste

Tooth cleaning and polishing paste in three abrasive grades for professional tooth cleaning and polishing of tooth surfaces as part of a prophylactic treatment.

2 Intensive enamel strengthener

Flairesse Gel

Gel for remineralising and fluoridising tooth enamel after removing plaque and discolourations, as well as for integration into customised prophylactic treatment plans.

Flairesse Foam

Prophylaxis foam for strengthening tooth enamel as a light alternative to the Gel with the same remineralising properties and a pleasant feel appreciated by patients.

3 Sealant for protecting hypersensitive teeth

Flairesse Varnish

Invisible, moisture-tolerant protective varnish for preventing caries and relieving pain for hypersensitive teeth or exposed tooth necks.

Flairesse Paste

The perfect all-rounder for super clean and perfectly polished teeth

Flairesse prophylaxis paste reliably removes hard and soft plaque and extrinsic discoloration caused by coffee, tea or tobacco – without any tendency to splash or drip. With three different abrasive grades for thorough and gentle cleaning action.

Available in the refreshing flavours of mint and melon for an instant feeling of freshness during tooth cleaning. Guaranteed to leave patients' teeth feeling smooth and soft immediately after the paste has been washed away. Thanks to containing sodium fluoride

and xylitol, which prevent demineralisation and inhibit the growth of cariogenic bacteria, Flairesse Paste also provides long-lasting caries protection.

Cost-efficient tube or convenient single-use unit? Whichever works best for you and your prophylactic treatments.

Pleasant application

Two fresh flavours to choose from

No splashing

For easy, clean usability

Three abrasive grades

Coarse, medium or fine to suit every need

Cleans reliably and gently

For healthy, white teeth

Protects the teeth

Contains xylitol and fluoride

Flairesse Gel

Flairesse Gel distinguishes itself through its high level of sustainability, because it does not contain any titanium dioxide, animal products or microplastics. The packaging is made from recyclable plastic and paper. In this way, the Gel perfectly rounds off this prophylactic treatment system without impacting the environment.

With a fluoride content of 12,300 ppm coupled with its inclusion of xylitol, Flairesse Gel promotes tooth enamel remineralisation and strengthening following professional tooth cleaning and inhibits the growth of acid-forming bacteria.

In addition to perfect protection, your patients also profit from its short, 60 second, application time and comfortable application system which includes a tray and polishing cup for individual teeth. Following application, the Gel can simply be spat out – with no need for rinsing. This saves time and water.

Flairesse Gel is available in the refreshing flavours of mint, melon and strawberry for maximum patient satisfaction, and is free from common allergy triggers.

The Gel has a perfect consistency: it doesn't drip and is easy to dose for each application. This ensures a perfect result for every patient.

The choice is yours

Your experts for optimum strengthening of dental enamel

Strengthens the enamel

Contains xylitol and fluoride

Convenient handling

Easy to use in the tray

Patient satisfaction

Short application time of only 1 minute

Pleasant application

Three fresh flavours: melon, mint and strawberry

Two products – same action

Choose between Flairesse Gel and Flairesse Foam

Flairesse Foam

This prophylaxis foam perfectly complements Flairesse Gel and has been especially formulated for those who prefer a lighter consistency. Flairesse Foam strengthens and protects tooth enamel – just like the Gel – with a fluoride content of 12,300 ppm, and does so in just 60 seconds. The inclusion of xylitol also makes this foam caries-inhibiting.

With or without tray – Flairesse Foam is flexible in terms of application and is hence also suitable for patients who are unable to keep their mouth open for long periods of time. Which makes it a genuine prophylactic hero.

During its short application time, the Foam creates a pleasant feeling inside the mouth and positive surprise in patients – which applies in particular to

children, who tend to love its light consistency. The Foam's consistency furthermore makes it less likely to be accidentally swallowed. And, in the unlikely event that should happen after all, there is no need to worry: it contains around 10-times less fluoride than conventional fluoride gels and pastes but transfers the same amount when applied to the surface of the teeth. And just as with the Gel, it does not require any rinsing once spat out.

Flairesse Foam is available in the flavours mint, melon and strawberry and is supplied inside a convenient dispenser designed for easy dosing.

Flairesse Varnish

Specially formulated for highly sensitive teeth

Flairesse Varnish is a prophylaxis varnish for quickly and reliably sealing dentine tubules, is invisible and saliva-tolerant. It soothes hypersensitive teeth and seals exposed tooth necks and root dentine. Thanks to its inclusion of xylitol and a fluoride concentration of 22,600 ppm, Flairesse Varnish is both antibacterial and caries-inhibiting. This makes it perfect for intensive fluoridation following professional tooth cleaning.

This specialist varnish can be systematically used to treat pain and to provide relief in particular to patients with highly sensitive teeth thanks to its instant, noticeable and long-lasting soothing action.

It is available in the flavours mint and melon as hygienic easily single-use units. The flexible enclosed single-use brushes ensure that it can be applied with a high level of precision.

Relieves pain

Soothes hypersensitive teeth

Protects the teeth

Contains xylitol and fluoride

Invisible

Clear varnish for natural aesthetics

Pleasant application

Two fresh flavours

Comprehensive prophylaxis system

Four premium products for professional tooth cleaning
