

iBOND® Total Etch

Bonding with confidence.

iBOND® Total Etch: The light-curing etch & rinse (two-step) bonding system.

- » **For your safety:** An optimised overall system attains high reliable bond strengths to both enamel and dentine, and also ensures optimal marginal adaptation. This has been verified by universities and dentists around the world.
- » **For your convenience:** One-coat application and fast air drying provide impressive, easy handling. Storage at room temperature.
- » **For your patients:** iBOND Total Etch provides maximum desensitisation and creates a homogeneous adhesive layer on the dentine and enamel – the base for outstanding, long-lasting results.

iBOND® Total Etch

The light-curing etch & rinse (two-step) bonding system.

- Easy to use with application of just a single layer and rapid air-drying.
- Clinically proven, reliable bond strength.
- Maximum desensitisation.
- Outstanding marginal quality.
- Impressive handling.
- Endorsed by numerous universities and practising dentists worldwide.
- No refrigeration necessary.

iBOND Total Etch indications:

- Bonding of direct composite, Polyglas® and compomer restorations.
- Bonding of indirect laboratory-fabricated ceramic, Polyglas® and composite restorations.
- Treatment of hypersensitive tooth regions.
