

Relaxed and efficient treatments

OptraGate[®] 2

Latex-free
lip and cheek retractor

NEW with
OptraGate[®]
Dry Control

For more comfort in daily practice

OptraGate® 2 is a latex-free lip and cheek retractor that optimally supports you in your day-to-day workflow. OptraGate 2 provides ample access to the treatment field and supports effective and straightforward relative isolation.

The use of this lip and cheek retractor allows you to work with greater focus and helps you improve the clinical quality and efficiency of your treatments. Discover how OptraGate 2 helps patients remain calmer, swallow less frequently and speak less. The third ring provides increased wearing comfort for your patients and helps them keep their mouth relaxed and open, even during longer treatments.

Every second

a treatment is performed with OptraGate® somewhere in the world*.

Clear visibility for esthetic restorative procedures

Combined with saliva-reducing aids, OptraGate 2 assists you in keeping the treatment area clean and dry, which reduces the risk for contaminations. This can improve the bonding performance of materials^[1]. Furthermore, OptraGate 2 provides free access to the treatment field, facilitating esthetic contouring.

Relaxed treatments for high-quality results

The flexibility and texture of the material ensure a comfortable wearing experience. OptraGate 2 supports patients in keeping their mouth open during treatment. The third ring enhances wearing comfort for your patients and allows you to work with greater focus.

Focused work for efficient treatment processes

OptraGate 2 allows practitioners to focus entirely on the treatment, as there is no need to manually retract lips and cheeks. Fewer interruptions lead to shorter treatment times and a more pleasant experience for everyone involved.

Your benefits at a glance:

- ✓ Relaxed patients and efficient treatments
- ✓ Accessible and clear treatment field
- ✓ Easy insertion thanks to three-dimensional flexibility, soft material and third ring
- ✓ Versatile in application
- ✓ Latex-free

* According to Ivoclar sales figures, applies to OptraGate.

Enhanced comfort thanks to the third ring

The integration of an additional third ring in OptraGate 2 reduces compressive stress on the jawbone (see blue arrows).

This enhances wearing comfort, helps your patients stay more relaxed and makes it easier for them to keep their mouth open during treatment.

The third ring also simplifies insertion into the patient's mouth noticeably.

Tips for choosing the right size:

To determine the correct size, please refer to the printed reference scale on the packaging. Determine the distance between the corners of the mouth by following the lip contour and using the reference scale on the foil pouch. Select the correct size based on the markings.

Flexible material – versatile use

High wearing comfort, good compatibility and a broad range of applications – OptraGate 2 excels in various clinical situations through **relative isolation**:

- ✓ Direct restorations
- ✓ Digital dentistry
- ✓ Orthodontics
- ✓ Prosthetics
- ✓ Diagnostics
- ✓ Prevention
- ✓ Bleaching
- ✓ Pediatric dentistry

Beyond dry. Simply efficient.

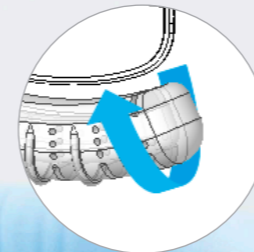

OptraGate® Dry Control is an innovative saliva ejector with an integrated tongue retractor. Especially when used in combination with OptraGate 2, it provides effective relative isolation and minimizes interruptions – resulting in clearly improved treatment efficiency.

NEW

Your benefits at a glance

Effective moisture control
for a consistently dry treatment area

270-degree suction coverage
Multiple openings around the suction element provide effective moisture control over a large area

Clear access to the treatment area and **added protection** of the tongue thanks to the integrated tongue retractor

Hands-free workflow: the self-retaining design ensures a secure fit in the lower jaw, allowing for autonomous treatment

Simple application: ready for immediate use and compatible with all standard dental units

Tip

OptraGate Dry Control can be individually adapted to fit different mouth sizes:

- ✓ Trimmable suction element
- ✓ Adjustable tongue retractor
- ✓ Flexible, bendable tube

«OptraGate® Dry Control protects the tongue and offers reliable suction performance. Thanks to its self-retaining design, it stays securely in place, reducing the need for constant adjustments and letting me work more smoothly.»

Dr Dan Lazăr, Rumänien

A strong team for relative isolation

OptraGate® Dry Control and OptraGate® 2 are designed to work together to provide exceptionally efficient relative isolation.

Soft tissue is effectively retracted while the treatment area is reliably protected from moisture contamination.

The result:

- ✓ Efficient treatment procedures
- ✓ Clear focus on the treatment area
- ✓ High patient comfort

Efficiency
combined

OptraDam Plus – for absolute isolation

OptraDam Plus is a three-dimensional rubber dam featuring flexible plastic rings and an anatomical design: for absolute isolation of the treatment field with an innovative, three-dimensional isolation technique.

Your benefits at a glance:

- ✓ Improved insertion thanks to flexible plastic rings and the absence of a metal frame
- ✓ Increased patient comfort as no metal frame is needed
- ✓ Reduced spread of aerosols in the practice^[2]
